WATER HEATER?

You may not spend too much time thinking about your water heater. But it ages fast; a year for you is like 10 for your water heater. So how old is yours really? Answer 5 easy questions to see if it's time to pull the plug on your old water heater, and start shopping for a newer, more efficient propane system.

1. How old is your water heater?

- A. 0-6 years
- B. 6-12 years
- C. 12+ years
- D. What? You need to replace them?!

Water heaters last, on average, about 12 years. Factors including heavy use, cold climates, maintenance, and more all affect the lifespan of your water heater.

2. Where in the US do you live?

- A. Southwest
- B. Southeast
- C. Midwest
- D. Northeast or Northwest

Live in a colder part of the country? Then your typical storage tank water heater is working harder, because it's working against ambient cold temperatures.

3. How many people live in your home?

- A. 1-2
- B. 3-5
- C. 6+
- D. Our home is like a clown car.

Hot water heaters are one of the hardest-working appliances in your home. When more people are using hot water, it puts extra strain on your water heater.

4. How often do you maintain your water heater?

- A. Annually
- B. Every few years
- C. I did it... once
- D. You need to maintain it?!

Annual maintenance* of your storage tank water heater does more than extend its life. You're helping it run more efficiently by removing sediment, and preventing it from rusting out.

*For safety, always follow your specific system's maintenance instructions.

5. What powers your water heater?

- A. Propane
- B. Natural Gas
- C. Electric
- D. Heating Oil

Some systems - like propane-powered water heaters - are just more efficient, environmentally friendly, and cost effective than others.
